JOB DESCRIPTION · DES-04

Product Designer (UI/UX)

Design | Full-time | Dhaka · Hybrid | 3+ years | BDT 120k – 180k / month

About the role

You will design end-to-end product experiences for our clients — from discovery workshops and user interviews to polished UI and the design systems that keep products consistent as they grow.

What you will do

- Run discovery sessions and turn messy requirements into clear user flows
- Design wireframes, prototypes and production-ready UI in Figma
- Build and maintain client design systems with tokens, components and documentation
- Test with real users every sprint and iterate on what you learn
- Present your work to clients with confidence and a clear rationale

What we are looking for

- 3+ years designing digital products (web and mobile)
- A portfolio that shows process, not just final screens
- Strong visual craft: typography, layout, colour and detail
- Comfort with Figma auto layout, variables and component properties
- Good English for workshops and presentations

Nice to have

- Motion design or prototyping in ProtoPie / Framer
- Basic HTML and CSS knowledge
- Experience designing for Bangla and English interfaces

How to apply

Send your CV and portfolio to **careers@nuvora.studio** with "Product Designer (UI/UX)" in the subject. We reply to every application within a week. The process: a 30-minute intro call, a paid take-home task (4 hours, paid at our day rate) and a final conversation with the founders.
