JOB DESCRIPTION · ENG-07

Senior Frontend Engineer

Engineering | Full-time | Dhaka · Hybrid | 5+ years | BDT 180k – 260k / month

About the role

You will lead the front-end build of websites and web apps for clients in travel, fintech, retail and health — turning Figma files into fast, accessible, beautifully animated products, and mentoring two mid-level engineers along the way.

What you will do

- Own front-end architecture on two to three client projects at a time (React, Next.js, WordPress)
- Build reusable component libraries that mirror our design systems in Figma
- Hit our quality bar: Core Web Vitals in the green, WCAG 2.2 AA, 100% typed
- Pair with designers early, prototype interactions and push back when something will not work
- Review code, run weekly demos with clients and keep releases boring

What we are looking for

- 5+ years building production React applications
- Deep knowledge of modern CSS, layout and animation
- Experience with Next.js App Router, server components and edge rendering
- Care for accessibility and performance — you measure, not guess
- Clear written English for client communication

Nice to have

- Headless CMS experience (Sanity, Contentful) or advanced WordPress block development
- Motion libraries (Framer Motion, GSAP) and WebGL basics
- Open-source contributions or a well-kept side project

How to apply

Send your CV and portfolio to **careers@nuvora.studio** with "Senior Frontend Engineer" in the subject. We reply to every application within a week. The process: a 30-minute intro call, a paid take-home task (4 hours, paid at our day rate) and a final conversation with the founders.

Team
Engineering · reports to Tahmid Hasan, Head of Engineering
